ABOUT

I am a design researcher specialized in information design and creative coding.

I have 8+ years experience in information and data visualization, digital humanities, creative coding, and digital methods for media research.

I teach Information Design, UI/UX Design, and Creative Coding and I am co-founder and board member of Associazione Abilitiamo Autismo ODV.

An observatory for Wiki Loves Monuments Italy

ABOUT

This project is centered around Wiki Loves Monuments Italy (WLM), a contest aimed at encouraging the Wikimedia Community to collect and share photographs of monuments on Wikimedia Commons under an open license.

Through an intuitive visualization tool, users can explore Italian regions and assess the photographic coverage of cultural landmarks over different time periods. This allows Wikimedia staff and volunteers to better direct community efforts and organize targeted photographic or mapping activities.

A custom backend was developed during the project to gather data from multiple sources, handle updates, and provide API endpoints, ensuring seamless integration and data accessibility.

Genetic Networks of Gustave Roud's Literary Works

ABOUT

This project offers a visual representation of Gustave Roud's creative process as he developed some of his most renowned literary works. We refer to these visualizations as "genetic networks", as they assist scholars in investigating the genesis and evolution of these works.

This initiative is part of the larger project, *Gustave Roud, «Œuvres complètes»*, funded by the FNS. It builds on an extensive archival study carried out by a team of literary scholars who examined Roud's diaries, notebooks, and other preparatory materials to uncover the development of his ideas and writings.

The result is a series of ten printed visualizations, constructed from network graphs and enriched with metaphorical imagery, such as sky maps, to bring Roud's creative journey to life.

CLIENT

University of Geneva

ABOUT

A digital humanities initiative that combines literary analysis and data visualization to explore the works of Italo Calvino.

Led by the University of Geneva, the project created a range of custom visualizations that allow users to navigate and analyze Calvino's complex literary universe. These visualizations include "guide visualizations" for exploring his complete works, "analysis visualizations" as tools for literary inquiry, and in-depth analysis pages to dive deeper into specific aspects of his writing. The project reinterprets traditional data visualization tools to fit the nuances of literary studies, offering new methods for interpreting qualitative information and ambiguous themes within Calvino's writings.

CLIENT

DensityDesign

Open source

Inspired by and built on top of open source projects. RAWGraphs is open to the community for contributions.

A wide range of charts

Almost 30 visual models to visualize quantities, hierarchies, time series and find insights in your data.

URL

www.rawgraphs.io

Your data is safe

Even though RAWGraphs is a web app, the data you insert will be processed only by your web browser.

Export and go anywhere

Save your project, or export it as vector or raster image. Edit it within your favourite softwares.

ABOUT

RAWGraphs is an open-source data visualization framework designed to simplify the visual representation of complex data for everyone.

Correlations, distributions

Correlations, proportions

Initially conceived as a tool for designers and data visualization enthusiasts, RAWGraphs bridges the gap between spreadsheet applications and vector graphics editors. The project, originally led and maintained by DensityDesign, was publicly released in 2013 and is widely regarded as one of the most significant tools in the field of data visualization. In 2019, Calibro and Inmagik joined the team responsible for the design, development, and maintenance of the project, further enhancing its capabilities.

Gantt chart
A Gantt chart is a type of bar chart, developed by Henry Gantt in the 1910s, that illustrates a project schedule. Gantt charts illustrate the start and finish dates of the terminal elements and summary elements of a project.

CH Independent Expert Commission

ABOUT

The project presents an extensive qualitative and quantitative research conducted by clients, in the form of a website. It uses visual and textual narrations to explore, from a sociological and historical perspective, the phenomenon of Switzerland's administrative detention, which persisted until the early 1980s.

Various visualization techniques, including statistical diagrams, maps, and networks, are employed throughout. The project is divided into two main parts: a narrative section and an interactive archive, which provides access to detailed data records.
